With these two forces combined, the motorcycle is guaranteed the best possible acceleration. And when further combined with the data collected from the lean angle sensor, the system detects and controls power wheelies and ensures stability as well as smooth wheel landing and acceleration. UPGRADED TFT DISPLAY A state-of-the-art full 5 TFT display keeps you informed with everything you need to know about the machine below you. Featuring improved functionality, each function is illustrated by an infographic of the motorcycle to directly show the user the relevant field
